

Larson Binkley has the retail experience you're seeking. Our client roster includes over 100 brands and facilities, from specialty retail to nationwide rollout.

Retail is our middle name. We not only understand the mechanical, engineering and plumbing aspects, but we also understand budgets, time constraints, permits and codes and we deliver timely turnaround on any code comments.

With Larson Binkley, you can be sure that we have your best interests at heart. From increased customer comfort, decreased maintenance and reduced energy costs, your brand will be shown in the best possible light, literally...without compromising your bottom line.

This is innovative engineering solutions at its finest. Where design modifications and unique processes are no problem, challenges are embraced, finished projects are functional and operations are simple.

Most of our competitors would probably claim the same thing, but how much of it is lip service? With Larson Binkley, the proof is in the pudding. Take for instance, our change-order percentage. Time and time again, it's consistently low. Low, as in less than 1/2 of 1% of the MEP construction cost. That's well below industry standards. And that comes from extensive experience and comprehensive quality control.

### Sustainability

Doing green design may be popular now, but we've been doing it for more than 20 years. Why? Because conserving resources has always been important. In fact, we were instrumental in helping produce one of the very first LEED® Retail Volume Certification Programs.

Sustainability is just common sense. For us, it means helping our clients choose long-term solutions that save money and resources, such as:

- Improving lighting efficiency with strategies that exceed energy codes, maximize flexibility and keep budgets in line.
- Designing higher performance HVAC system solutions that have improved air quality and green refrigerant alternatives.
- Specifying plumbing fixtures that consume less water and water heaters that reduce standby losses.

Our staff of LEED® Accredited Professionals can provide in-depth knowledge of LEED® rating systems, expertise on USGBC policies and procedures; experience with other programs such as EPAct and Energy Star, and their correlation with LEED® certification and have numerous projects certified to various levels.

### Prototype Development and Maintenance

Larson Binkley is no novice when it comes to prototypes. Many retailers across the country have come to us for this kind of engineering, no matter what form they're seeking. We can create from standard pad site plan drawing sets for freestanding buildings, to kits of parts, both complete with details, schedules and applications for various systems and conditions for existing buildings.

Our standard service includes the maintenance of drawing standards and details, such as some automation of CAD documents, which are produced in AutoCAD® and Revit®.
